

## **About the company**

Sinhal Udyog, a Crystal Group company- The Fastest-Rising Indian Technology Enterprise Empowering Utilities since the last decade.

We are a company led by visionaries who aspire to impact people's everyday lives by providing them access to quality, secure, and reliable energy.

Driven by research, with entrepreneurship as our central pillar, we are essentially an innovation lab that aims to empower utilities by providing them with futuristic and revolutionary technology solutions.

We truly believe that highly motivated, responsible and proactive employees are the main reason for the success and development of our company.

### **Before you read further, take time to ask yourself:**

- Are you looking to build solutions rather than merely a coding job?
- Do you think you have a strong sense of logic?
- Can you deliver in a startup-like environment?

### **If you answered YES, we are eager to meet you**

Sinhal Udyog is an employee-centric organization that stands tall and robust on the strong shoulders of a **+100 strong workforce based in Delhi NCR**, bringing their best at work every day.

We concede and conform to the thought, ***when great people come together, they bring out nothing but 'The Greatest Solutions.'*** Each of our resources is invaluable to us that we prize and praise in words, action, and spirit.

We are looking for a **.NET Core developer** with proven hands-on experience in working with ASP.NET MVC, Core, and .NET frameworks. You must have an in-depth understanding and knowledge of building scalable web applications using these technologies.

### **Position - .Net Core Developer**

Your role involves developing a relevant solution that is secure, scalable, high performing, and testable. Your typical business day will consist of building IOT applications, ensuring goal-aligned development of the projects.

## **Technical Requirements**

- 4-6 years of professional experience building enterprise-level software in Net/.Net Core C#
- Comprehensive exposure to Object-Oriented Design skills using C# and .NET along with async processing, multithreading, and GC.
- Experience with Entity Framework and other ORM frameworks
- MS SQL, Postgres, and NoSQL database integration expertise
- Efficient expertise building applications using a microservices-based architecture.
- Basic know-how of Azure DevOps CICD pipelines
- Exposure to Docker, Containerization, and Kubernetes
- Skilled in test-driven development
- Ensure the quality and low bug rates of code released into production
- Proven background at working on agile development teams (ideally using Scrum or Kanban)

## **Essential Requirements:**

- Excellent presentation, verbal, and written communication skills.
- You are a critical thinker with a strong bend towards logic and analysis and do have the ability to dissolve complex technical requirements into simple solutions.
- Capable of building sustainable and productive relationships with colleagues and key individuals.
- Do have the aspiration to take the initiative, moving projects and ideas forward with clarity and confidence.

## **Preferred Requirements:**

- Experience working on IoT projects
- Angular or ReactJs or equivalent

## **Minimum Qualification:**

- BE / BTech / MCA / MS / MTech in Computer Science or equivalent IT Branch
